

Exercise 4b. Kubernetes on Azure

The demo we just described is relatively easy to do. But there is another that is much simpler.

Go to <https://docs.microsoft.com/en-us/azure/container-service/kubernetes/container-service-kubernetes-walkthrough>

This demo will help you launch a small Kubernetes cluster and deploy two containers: a redis cache and a simple web app.

You will want to install the azure command line tools on your machine. The link for that is here:

<https://docs.microsoft.com/en-us/cli/azure/install-azure-cli>

This works for the mac and pc and linux.

The Kubernetes web app

The Kubernetes web app is a great way to watch your cluster, launch containers and monitor services.

The instructions to do that are here

<https://docs.microsoft.com/en-us/azure/container-service/kubernetes/container-service-kubernetes-ui>
